User Instructions

First of all, thank you for choosing our products, please read the corresponding instructions carefully before using.

In-Ear Monitors are highly precise electronic devices and their individual requirements of use should be strictly observed. Due to sweat and humidity encountered in daily use, it is especially important to perform daily maintenance.

Keeping your In-Ear Monitors clean is essential. Sweat and earwax built up on hearing aids and could create bacteria, as well as affect the unit's performance.

The SaniDry UV Sanitizer and Dryer dehumidifies and dries In-Ear Monitors by use of heat controlled by a thermostat. To kill any bacteria, UV LED tubes generate ultraviolet light to efficiently sterilise and disinfect In-Ear Monitors.

SaniDry is a portable UV Dryer, Sanitiser, and Dehumidifier with professional Disinfection Technology. It removes harmful moisture from earphones and other electronics for longer lasting performance. It eliminates 99.99% of bacteria, operates quietly and has a large capacity.

There are 2 temperature settings (high and low) and up to 8 hour drying time. It is small and is easily connected through a USB-C connector.

Operation

To start
Connect the power cord from your adapter/powerplug to the dryer.
The indicator light will turn to blue when connected properly.

1. Dryer Cycle
Choose a 2-hour cycle or 8-hour drying cycle.

2. Temperature
Select the required temperature. Dries and dehumidifies earplugs at low (up to 40℃) or high (up to 50℃ degrees).

3. Operation:
Choose UV Cleaning. 5 Mins double UV-C lights make it an ultimate drying and cleaning experience for your In-Ear Monitors.

How it works

1. Constant heating
The dryer regulates the combination of time and temperature itself, and the heat generated by the heating circuit is transmitted through the air to the dryer cavity to In-Ear Monitors.

2. Sterilisation
LED UV tubes generate ultraviolet light, killing surface bacteria and viruses. The two UV tubes have a wider and more comprehensive range of exposure for better sterilisation.

User Instructions

Technical specifications

Product name	SaniDry by Pacific Ears
Functions	Dryer, Dehumidifier & Sanitiser
Usage	Earphones, Drivercomms, In-Ear Monitors and other electronics
Timer	2 hours or 8 hours
Temperature	Low (30-40°C) or high (35-50°C) depending on a variety of circumstances, such as humidity, outside temperature or atmospheric circumstances.
UV-C Range	260-280 nM
Exterior size	110*90*40mm

- ELECTRONICS DRYER AND DEHUMIDIFIER - SaniDry Dryer and Dehumidifier will simply and effectively remove moisture from In-Ear Monitors and other In-Ear Communication Devices. It dries and dehumidifies electronics at a low or high temperature setting. This reduces repairs and extends the life of your device.
- EASY TO USE AND FULLY AUTOMATIC - Automatic shut off, simple starts a 2-hour cycle or 8-hour cycle for overnight-sleeping maximum drying effectiveness.
- DOUBLE LIGHT CLEANING - 5 Mins double UV-C lights make it an ultimate drying and cleaning experience for your hearing aids. Drying and cleaning is vital for electronics to stay in prime condition for as long as possible.
- ONE YEAR QUALITY ASSURANCE- 1-Year Warranty
